

SAŽETAK

Tema ovog završnog rada je virtualni 3D model trkaće Formula 1 staze u Australiji koja se proteže kroz „Albert Park“ u Melbournu. Istraženi su procesi potrebni za koncipiranje jedne takve virtualne scene.

Scena je zamišljena kao realan prikaz staze i parka kako za vrijeme održavanja utrke. Modeli i elementi u sceni su kreirani kako bi pratili tematiku formule i pridonosili njezinom doživljaju.

Praktični dio rada obuhvaća izradu i detaljan prikaz procesa izrade elemenata sastavljenih od 3D modela potrebnih za scenu, kao i samu izradu scene sa smještenim elementima.

ABSTRACT

The topic of this final paper is a virtual 3D model of Formula 1 racing track in Australia, which stretches through Albert Park in Melbourne. The processes necessary for creating such a virtual scene have been explored.

The scene was conceived as a realistic representation of the track and the park during the race. Models and elements in the scene were created to follow the theme of the formula and contribute to its experience.

The practical part of the work includes the creation and detailed presentation of the process of creating elements composed of 3D models necessary for the scene, as well as the creation of the scene itself with the elements placed in it.

Keywords: virtual 3D model, Formula 1, racing track, Australia, creation process, 3D models, race, virtual scene
